

# Advice and support for microgeneration manufacturers and installers

## What support can we offer?

Envirolink Northwest and the Energy Saving Trust are working on the development of the microgeneration supply chain by supporting companies so that they can reach their market potential. The microgeneration work in the region aims to enhance companies' competitiveness and maximise the new opportunities arising from national and regional programmes.

Our free and confidential service includes:

Technical support for training and MCS Accreditation

Inclusion in the annual microgeneration supply chain directory

One to one advice

Promotion and exposure at trade fairs and meet the buyer events

Networking opportunities

Envirolink Northwest is a not-for-profit organisation funded by the Northwest Regional Development Agency, the European Union, and the region's local authorities.

The Energy Saving Trust is the source of free advice and information for people across the UK looking to save energy, conserve water and reduce waste.

Through this joint project we can help businesses optimise growth by ensuring that the microgeneration industry is ready to satisfy domestic and commercial demand.

## Eligibility

This service is available to any North West company that is either a manufacturer or installer of microgeneration technologies.

For more information and to hear about how this service can benefit you, please contact Saray Cruz on **01925 855 751** or at [s.cruz@envirolinknorthwest.co.uk](mailto:s.cruz@envirolinknorthwest.co.uk)
